PROJECTS

Weather App using Android & HTML

Team Member *Aug 2020 - Sep 2020*

The android-based weather app can be developed using HTML, CSS, JavaScript. This project is mainly used for forecasting the weather. By using this project, the user can verify the climate condition & forecast whether that is a sunny day or cloudy day. The app user can write down the city name across the globe within the app.

Random Name Generator

Team Member *Jun 2020 - Jul 2020*

The random name generator project is designed in HTML language using JavaScript and CSS. By using this project, the user generates different person names from all over the world through one click. But we have to select the name of the country, gender, and names after that click on the generate button. This project runs in Mozilla/Chrome browser and uses JavaScript to make the validation in a particular part of the project.

Guest Manager Project using HTML

Team Member *Oct 2019 - Nov 2019*

The guest manager project is designed with different concepts of CSS, JavaScript & HTML. This project is used to keep the data of guests who are coming to the ceremony. To maintain their data records by adding guests, one has to enter his name, address, etc.
